# Enabling and disabling metadata backups

You can enable or disable metadata backups for Salesforce.

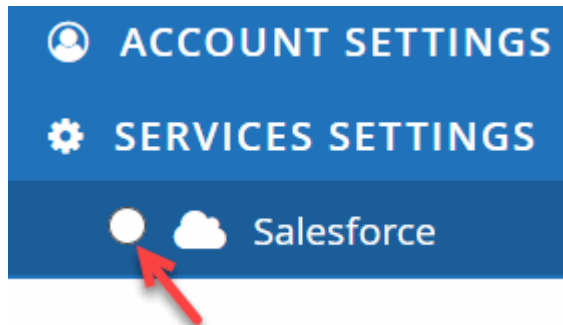

## Enabling metadata backups

Enabling metadata backups provides metadata backups for all organizations within a tenant account.

### Steps

1.

Click  and select **Salesforce** under **Services Settings**.

2. Click **Enable Metadata Backup** to turn the feature on.

After enabled at the tenant level, metadata for all the organizations will be backed up.

## Disabling metadata backups

You can disable metadata backups at the organization level. After metadata backups are enabled for all organizations, this allows you to control which organizations will not have metadata backups.

### Steps

1. To disable metadata backups, go to **Services**.
2. Select **Production Instances** or **Sandbox Instances**.
3. Select the number of **Protected** instances.
4. Select the organization for which you want to disable metadata backups.
5. Click on **Metadata Backup** to turn the feature off.
